Product data sheet

ESD megohmmeter set with digital display, alternative version

EN | 2026-11-12

Item number: DSWL45918

Megohmmeter set with digital display in a further version for ESD resistance measurements. It is used to test dissipative capability and grounding at workstations, floors and equipment in your EPA.

Description

This set adds a further version to the range of megohmmeters with digital display.

With a megohmmeter you check whether ESD materials dissipate charges within a suitable range. Typical measurements include surface resistance and resistance to ground.

This version has its own calibration certificate. The catalogue data contain no details on the scope of delivery and on the differences from the other sets; we will clarify them with you before the quotation.

Typical areas of use

• Measurements at ESD workstations

• Testing floors and mats

• Inspection of shelves, trolleys and containers

• Documented tests for audits

What to look for when choosing

• Scope of delivery: have the differences from the other sets shown to you.

• Measuring tasks: clarify which tests you carry out regularly.

• Calibration certificate: available separately for this version.

• Documentation: plan how you will record measured values.

Technical data

Item number	DSWL45918
Supply	on request, quotation with price and pack size

Notes on use

Coordinate test intervals and measuring methods with your ESD programme. Store the measuring instrument and electrodes clean and dry so that measurements remain reliable.
