Product data sheet

ESD floor covering, roll material, dark grey, 3.5 mm

EN | 2026-11-12

Item numbers: DSWL87669 - DSWL87668 (2 variants)

Dark grey ESD floor covering as roll material in 3.5 mm thickness. The rolls are 10 m long and 1200 or 1500 mm wide. For dissipative floor areas in production, laboratory and storage.

Description

The dark grey roll covering makes large floor areas dissipative and forms the basis of an ESD protected zone.

In an ESD protected zone, the floor is part of the dissipation path: people wearing ESD footwear pass charge via the covering to ground. Roll material covers larger areas with few joints.

The 3.5 mm version is the sturdier variant of this covering group. With a width of 1200 or 1500 mm and a length of 10 m per roll, the number of rolls can be adapted well to the room. The dark grey shade is hard-wearing in daily use.

Typical areas of use

• Electronics manufacturing and placement

• Test and repair areas

• Storage for electrostatically sensitive components

• Laboratories and workshops

What to look for when choosing

• Width: 1200 or 1500 mm, depending on room width and the desired position of the joints.

• Thickness: 3.5 mm for areas with heavier use.

• Grounding: Always connect the covering to a grounding point, for example with a grounding strip or grounding cord.

Technical data

Variants	2 (item numbers see table)
Supply	on request, quotation with price and pack size

Notes on use

Plan the grounding of the floor before installation and test the dissipation of the finished surface. People should wear ESD footwear for the floor to be effective. The general framework for ESD protected zones is given by IEC 61340-5-1.
