Product data sheet

ESD winter hat

EN | 2026-11-12

Item number: DSWL91879

ESD winter hat for cold work areas in the ESD protected area. It keeps the head warm and replaces private hats, which can become charged. We will give you the material, colour and size on request.

Description

The winter hat provides warmth in cool ESD areas without undermining the protective measures.

It can get cold in warehouses, at ramps or in air-conditioned halls. Private knitted hats often contain synthetic fibres that become strongly charged when put on and taken off.

An ESD winter hat closes this gap in the equipment. We do not have any information on colour, material and size; you will receive these with the quotation.

Typical areas of use

• Cold storage areas

• Goods receipt and shipping

• Workstations at hall doors

• Outdoor areas with ESD requirements

What to look for when choosing

• Data: Request colour, material and size in advance.

• Combination: Matches the ESD snood and ESD jacket.

• Use: For areas where temperatures are permanently low.

• Quantity: Plan hats per person and not as a shared item.

Technical data

Item number	DSWL91879
Supply	on request, quotation with price and pack size

Notes on use

The hat complements ESD clothing; personal grounding via shoes or wrist strap is still necessary. Where possible, do not put the hat on or take it off directly at a workstation with open components.
